DETAILED ACTION

Claim Objections

Claims 4-21, and 23 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-21, and 23 have not been further treated on the merits.

Claims 28-41 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 28-41 not been further treated on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 22 provides for the use of a method for coating a substrate particle, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claims 22 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under

Art Unit: 1762

35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 and 24-27 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 1 and 24 recite the limitation of performing a spectrometric measurement on a coating during the step of forming the coating to obtain a measurement value of at least on principal parameter related to the coating. The specification states on page 8 paragraph 3 that the spectrometric measurement unit is arranged at the periphery of the coating chamber where it performs a spectrometric measurement on the coating during the coating process, followed by representing the measurement data in a sample vector. Neither the specification nor the claims explain how to make the spectrometric measurement and use the measurement data to derive a measurement value related to the coating.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. 5,518,759 to Sevillano et al.: Sevillano et al. describe a process for coating a substrate with diamond where a spectrometer is used to measure the plasma coating composition.

Art Unit: 1762

U.S. 5,871,805 to Lemelson: Lemelson discloses a process for computerized control of a vapor deposition process where the coating thickness is measured and the data is sent to a computer controller.
